

PRODUCT REQUIREMENTS DOCUMENT

Religious Institution Donor Management & Recurring Giving Platform

PRD-2026-YS-001 | Dhruv Dingra | May 2026

Document Reference	PRD-2026-YS-001	Date of Issue	19th May 2026
Prepared For	Dhruv Dingra	Prepared By	Nextgen Rytful Media Tech LLP (Rytful Media)
Project Type	Multi-Tenant SaaS — Donor Management & Recurring Giving Platform	Platform	Web-based MVP — Cloud Hosted — Mobile Responsive
Target Market	Temples, Churches, Mosques, Religious Charities, Non-Profit Organizations	Revenue Model	CAD \$25–30/month per organization + Payment Processing

1. Executive Summary

This PRD defines the complete scope, architecture, feature set, and delivery plan for a **Multi-Tenant Donor Management and Recurring Giving SaaS Platform** serving religious institutions including temples, churches, mosques, and non-profit charitable organizations. The platform will integrate with an existing payment processing infrastructure and recurring billing API, enabling organizations to automate recurring donations, manage donor relationships, and generate tax receipts — all from a branded, self-service environment.

Rytful Media brings direct relevant experience to this engagement. We have already built and deployed two production SaaS platforms with architectural parallels to this requirement: **OgaCRM** (crm.ogaapps.in) — a multi-tenant CRM SaaS with subscription management, role-based access, and automated notification workflows; and **FoodAppi** (demo.foodappi.xyz) — a multi-organization PWA with recurring order management, per-tenant data isolation, payment gateway integration, and self-service portals. Neither is identical to a donor platform, but the underlying SaaS architecture, multi-tenancy, recurring billing logic, and notification systems are directly transferable.

Multi-Tenant SaaS Architecture	CAD \$25–30 Monthly Per Org	4 User Types Admin / Org / Donor / Platform	REST API Payment Integration
--	---------------------------------------	---	--

2. Rytful Media — Proof of Capability

Before detailing the platform requirements, Rytful Media would like to highlight two live productions that demonstrate our capability to deliver this engagement:

Similar Systems Built by Rytful Media	Similar Systems Built by Rytful Media
OgaCRM — crm.ogaapps.in A fully deployed multi-tenant WhatsApp CRM SaaS platform with: centralised team inbox, visual automation flow builder, AI agents with function calling, mass campaign tools, multi-user role-based access control, contact and CRM management, analytics and reporting, and multi-device WhatsApp connection support. <i>Relevance to Donor Platform: Multi-tenant SaaS architecture, subscription management, automated notifications, role-based access (admin vs. end-user), and recurring workflow automation — all directly parallel to the donor platform requirements.</i>	FoodAppi — demo.foodappi.xyz A PWA-based online food ordering and restaurant management system with POS integration: multi-restaurant admin panel, customer-facing ordering portal, recurring order management, payment gateway integration, real-time order tracking, email/SMS notifications, and a full reporting dashboard per restaurant tenant. <i>Relevance to Donor Platform: Multi-organization dashboard architecture, customer self-service portal (parallel to donor self-service), payment gateway integration, automated billing cycles, and per-tenant data isolation — directly applicable to the donor platform's multi-tenant and recurring billing requirements.</i>

3. Business Model & Platform Overview

3.1 Revenue Model

Subscription Revenue: CAD \$25–30 per organization per month. Billed monthly or annually. Platform admin manages all organization subscriptions.

Payment Processing Revenue: Commission or markup on donation transactions processed through the integrated payment gateway. High-frequency recurring donations make this a significant revenue stream.

Future Revenue Streams: Event fundraising module fees, premium CRM integration tiers, QR-code kiosk licensing, and mobile app subscriptions.

3.2 Platform Architecture

The platform operates as a **true multi-tenant SaaS**: a single codebase, single deployment, but with complete data, branding, reporting, and settings isolation per organization. Each religious institution has its own branded donor portal, its own donor database, and its own admin panel — invisible to all other tenants on the platform.

Layer	Who Uses It	What It Does
Platform Super Admin	Dhruv Dingra / Platform Owner	Create and manage organizations, manage subscriptions, view platform-wide stats, support tools.
Organization Admin	Temple / Church / Mosque Admin	Manage their donors, configure recurring plans, view their dashboards, generate tax receipts.
Donor Self-Service Portal	Individual Donors	View their donation history, manage recurring donations, download tax receipts, update payment details.

Payment / Billing Engine	Backend — Automated	Tokenized payment enrollment, automated recurring billing, failed payment retries, receipt generation.
--------------------------	---------------------	--

4. Feature Specification — Complete MVP Scope

4.1 Platform Super Admin Portal

Feature	Description	MVP
Organization Management	Create, edit, suspend, and delete organization accounts. Assign subscription tier. Set custom branding (logo, colour) per org.	✓
Subscription Management	View billing status per organization. Trigger manual billing. Issue credits or overrides. Upgrade/downgrade plan.	✓
Platform Analytics Dashboard	Total active organizations, total donors across platform, total donations processed (volume + value), churn rate, MRR.	✓
Support Tools	Impersonate org admin for support. View error logs. Manually trigger failed payment retries. Reset donor passwords.	✓
Onboarding Flow	Self-serve onboarding for new organizations — name, logo, payment gateway credentials, subdomain or slug setup.	✓

4.2 Organization Admin Portal

Feature	Description	MVP
Donor Database	Full donor profiles: name, email, phone, address, donation history, recurring plan status, communication preferences, and notes.	✓
Recurring Donation Plans	Create and manage recurring giving plans (weekly, monthly, quarterly, annual). Assign donors to plans. View next billing date, amount, and status per donor.	✓
One-Time Donations	Log and process one-time donations. Support for cash (manual entry) and card/online.	✓
Payment Enrollment	Secure tokenization of donor card/bank details via integrated payment gateway. No raw card data stored on platform. PCI-DSS compliant flow.	✓
Tax Receipt Generation	Automated tax receipt (PDF) generated on every donation. Sent via email. Downloadable from donor portal and org dashboard. Configurable receipt template per org.	✓
Donation Reporting Dashboard	Monthly/annual giving summaries, donor retention rates, top donors, plan-wise revenue, failed payment tracking.	✓
Email & SMS Notifications	Automated: donation confirmation, recurring billing success/failure, receipt delivery, expiring card alerts, and custom org announcements.	✓

Donor Communication	Send targeted messages to donor segments (e.g. lapsed donors, high-value donors). Built-in email composer with org branding.	✓
Failed Payment Management	Automatic retry logic (configurable: 3, 5, 7 day intervals). Email/SMS alert to donor on failure. Manual override available.	✓

4.3 Donor Self-Service Portal

Feature	Description	MVP
Donor Registration & Login	Email/password login with OTP verification. Password reset. Optional: social login (Google).	✓
Donation History	Full chronological list of all donations made. Filter by date, type, amount. Download as PDF/CSV.	✓
Recurring Plan Management	View active recurring plans. Pause, modify amount, or cancel. Change billing frequency. All changes effective next cycle.	✓
Payment Method Management	Update saved card/bank details securely via tokenized update flow. Add new payment methods.	✓
Tax Receipt Download	Download any past tax receipt as PDF. Annual consolidated receipt for tax filing.	✓
Profile Management	Update personal details, communication preferences, and notification settings.	✓

4.4 Payment & Billing Engine

Feature	Description	MVP
REST API Integration	Full integration with existing payment processing infrastructure and recurring billing API as specified by Dhruv Dingra. Webhook handling for all payment events.	✓
Secure Tokenization	Card/bank details tokenized at payment processor level. No raw sensitive data on platform servers. PCI-DSS scope minimized.	✓
Automated Recurring Billing	Scheduled billing jobs per org's donor recurring plans. Configurable billing day, frequency, and amount per plan.	✓
Failed Payment Retry Logic	Configurable automatic retry on failure. Donor notification at each retry. Plan suspension after max retries.	✓
Automated Tax Receipts	Receipt auto-generated on successful payment. PDF template configurable per org. Sent via email. Stored in donor portal.	✓
Multi-Currency Support	CAD as primary. USD and other currencies configurable per org if payment gateway supports.	✓

5. Technical Architecture

Layer	Technology	Purpose
Frontend	Next.js 14 (App Router) + Tailwind CSS	Fast, SEO-ready, mobile-responsive UI for all three portals.
Backend / API	Node.js + Express.js or Next.js API Routes	REST API, business logic, webhook handling, billing scheduler.
Database	PostgreSQL (recommended) or MongoDB	Multi-tenant data model with row-level org isolation. Audit trail.
Authentication	NextAuth.js / JWT + OTP	Secure login for all user types. Role-based access control.
Payment Integration	Client's existing REST API + Webhooks	Tokenization, recurring billing, failed payment events, receipt triggers.
Email / SMS	Resend (Email) + Twilio or MSG91 (SMS)	Donation confirmations, receipts, billing alerts, org announcements.
PDF Generation	Puppeteer or @react-pdf/renderer	Automated tax receipt PDF generation per donation.
Hosting	AWS / GCP / Vercel + Cloud DB	Scalable cloud infrastructure. Auto-deploy. 99.9% uptime target.
Multi-Tenancy	Schema-per-tenant or row-level isolation	Complete data separation between organizations. Configurable per org.
Security	HTTPS / TLS + Rate Limiting + OWASP Top 10	Secure authentication, encrypted data at rest and in transit.

6. Future Enhancements (Post-MVP Roadmap)

Enhancement	Description	Phase
Mobile Apps (iOS + Android)	Donor-facing mobile app for donation management, receipts, and giving history.	Phase 2
QR-Code Donations	Org-branded QR codes for in-person one-time and recurring enrollment at religious venues.	Phase 2
Kiosk Donation Mode	Dedicated kiosk/tablet interface for donation terminals at the entrance of temples/churches.	Phase 2
Event Fundraising Campaigns	Create time-limited campaigns with goals, progress bars, and donor leaderboards.	Phase 3
CRM & Accounting Integrations	QuickBooks, Xero, Salesforce, and Mailchimp integrations for advanced orgs.	Phase 3

Donation Terminal Hardware	Integration with existing donation terminal hardware infrastructure.	Phase 3
----------------------------	--	---------

7. Delivery Timeline — MVP Build Plan

Phase	Duration	Activities	Deliverable
Phase 1 Foundation & Architecture	Week 1	Project kickoff, technical architecture finalization, multi-tenant database schema design, payment API review and sandbox setup, UI/UX design for all portals.	<i>Approved architecture doc, DB schema, Figma designs for all portals.</i>
Phase 2 Core Platform Development	Week 1–2	Super admin portal, organization admin portal, donor database, recurring plan management, payment tokenization flow, automated billing engine, basic reporting dashboard.	<i>Functional staging environment with all core portals operational.</i>
Phase 3 Donor Portal & Receipts	Week 3–4	Donor self-service portal, tax receipt PDF generation, email/SMS notification system, failed payment retry logic, donor communication module.	<i>Full end-to-end donor journey functional on staging.</i>
Phase 4 QA & Security	Week 4–5	End-to-end testing of all modules, security audit (OWASP), payment flow QA, cross-device testing, performance optimisation, UAT with client.	<i>QA sign-off, security audit report, UAT approval.</i>
Phase 5 Deployment & Handover	Week 5	Production cloud deployment, DNS and SSL configuration, platform documentation, admin training, source code handover.	<i>Platform live in production. All credentials and docs transferred.</i>

8. Client Responsibilities

Payment API Documentation: Complete REST API documentation and sandbox credentials for the existing payment processing and recurring billing infrastructure, provided before Phase 1.

Branding Assets: Platform logo, colour palette, and any design guidelines for the super admin and organization-level branding.

Tax Receipt Template: Sample tax receipt format / legal template required for Canadian non-profit receipts (CRA compliance).

Org Onboarding Workflow: Confirmation of the org onboarding flow (manual by platform admin vs. self-serve) and subscription billing cycle.

UAT Participation: Designated technical representative available for User Acceptance Testing in Phase 4 and sign-off within 5 business days.

Hosting Preference: Confirmation of preferred cloud provider (AWS / GCP / other) and whether Rytful Media should procure or client-managed.
